Please supply approximate fullness of:

We recommend a fullness close to 1.5

SPECIFICATIONS

Number of identical curtains required

Is part of the rail curved? YES NO

Comments :

* Please note that because of what they are made of, Texaa sound-absorbing curtains contribute to sound absorption in a space, not sound reduction from one area to another.

** DB sound-reducing curtains used as partitions, dampen the transmission of sound between the two separated areas by approximately 10 dB.
